To whom it may concern,

We are very pleased to support and endorse the use of Emergent Biochar due to the truly amazing results we have had using this product in our business operations.

We are a landscaping and Fencing Company, with a long history of doing exceptional work in our community. We have always looked for ways in which we can differentiate our business from competitors and provide superior service to our clients. Consequently, when we found out about this new product called Biochar, we were very intrigued.

We have now been using Emergent Biochar in our landscaping business for just about six months. We have used it when planting a variety of trees, shrubs and flowers and in every case, we have been amazed at the results.

The plants germinate quicker, grow stronger stalks, are healthier, and produce more volume of leaf and flower.

We are also impressed with the impact that Biochar has on water retention and in the prevention of erosion.

We are using about 30% less water with our plantings and are seeing increased stability in the soil.

Emergent Biochar has indeed allowed us to rise above the competition and deliver superior service to our clients.

Many thanks to the producers of Emergent Biochar. We wish them every success.

Sincerely,

Claude Diedrick
